

ÁNGEL GABRIEL SOTO OROSCO

720-724-5129 | sotooroscoangel@gmail.com | linkedin.com/in/angelgabrielosoto | Mexico

PROFESSIONAL PROFILE

Mechatronics Engineer with two years of hands-on field experience in industrial automation, aiming to lead automation projects in the automotive industry. Applies Scrum/JIRA project methodology — used on the Hunucmá rotary-kiln project — alongside CAD/CAE design tools, with a strong interest in continuous improvement.

EDUCATION

Tecnológico de Monterrey, Campus Toluca <i>Bachelor of Engineering, Mechatronics — Automotive Engineering Concentration</i>	Toluca, Mexico 2021 – 2025
CETis No. 94 <i>Technical Certificate, Computer Support & Maintenance</i>	Mexico 2018 – 2021

EXPERIENCE

CEMI Automation — Automation Engineer	Feb 2025 – Present
- Installed and wired power, control, and safety panels for industrial automation systems across live production plants (Unilever, Cremería Americana, Flora Food), working with 127V/220V/440V systems. - Led field implementation of a three-line overhead palletizing system for Knorr (Unilever): surveyed cable routing and sized cable for 40+ SEW-Eurodrive motors, then wired them into three control panels alongside the added VFDs as project scope grew. - Installed Keyence GS-M safety interlocks on elevator/descender guards and wired the safety circuit into a Compact GuardLogix 5380 safety PLC, verifying correct operation. - Managed projects end-to-end — site surveys, BOMs, and CAPEX quotations/bidding — through installation and start-up. - Performed field troubleshooting and diagnostics across Allen-Bradley, Siemens, Mitsubishi, and Omron platforms; recognized by CEMI's Engineering department for quality of work. Promoted from intern to full-time Engineer within one year.	
ITESM • General Motors — Formula SAE — Automotive Electronics Engineer	Aug 2024 – Dec 2024
- Led the electrical subsystem of a Formula SAE race car: designed the full electrical system, wiring diagrams, distribution, fuse box, and harness routing. - Built the vehicle's safety system (e-stops, kill switches, start-up interlocks) and programmed the instrument panel. - Implemented sensors for temperature, oil pressure, RPM, speed, clutch, and brake light; ran electrical load calculations. - Diagnosed and resolved carburetion issues on the vehicle's 1993 Honda CBR600 engine. Result: 3rd place, Formula SAE UANL (Monterrey, 2025).	

PROJECTS

Hunucmá Rotary Kiln — Manufacturing Lead	Aug 2025 – Dec 2025
- Built a functional prototype of a four-chamber rotary-kiln incinerator addressing municipal solid waste in Hunucmá, Yucatán; led its manufacturing and integration. - Designed, manufactured, and tested the burner; ran an 18-run Design of Experiments (DOE) studying its flame performance. - Presented the project to the Hunucmá municipal government and an external CEMEX Yucatán engineer.	

LEADERSHIP & ACTIVITIES

- LIFE Recognition**, Tecnológico de Monterrey — for student leadership and development.
- 1st Place**, ExpoIngenierías, ITESM Toluca — 2023, 2024, and 2025.

SKILLS

Automation:	PLCs (Allen-Bradley, Siemens, Mitsubishi, Omron), VFDs, Keyence sensors, industrial safety systems, control & power panels
Design:	Siemens NX / NX Electrical, ANSYS, SolidWorks, CAD/CAE
Programming:	Python, C++, Web Development (React, TypeScript), Microsoft Office
Data & Networks:	Excel, Minitab, R (basic); Modbus, PROFINET/PROFIBUS, AS-i, SCADA (working knowledge)
Project Delivery:	BOM & CAPEX quotations, FMEA / DOE / ANOVA, SCRUM / JIRA
